

MUHAMMAD ZAHID SETIANSYAH

Unity Game Developer | VR & IoT Integration | C# & Interactive Systems
+628561549323 • mhmdzahids@gmail.com • [linkedin.com/in/muhammad-zahid-setiansyah](https://www.linkedin.com/in/muhammad-zahid-setiansyah)
• Kabupaten Bekasi, West Java

PROFESSIONAL SUMMARY

Informatics student specializing in Unity game development and interactive systems, with hands-on experience building VR simulations and integrating IoT hardware into real-time gameplay. Proven ability to implement C# game logic, NPC systems, player controllers, and hardware-software communication layers. Dean's Honor Roll recipient and INTI Exchange Program alumnus. Currently developing an original arcade game as a personal project, driven by a deep interest in creating immersive, purposeful play experiences.

EDUCATION

President University — Bachelor of Informatics (Artificial Intelligence for Healthcare)

Sep 2024 – Present

GPA: 3.80 / 4.00

INTI International University, Malaysia — Exchange Program (Computer Science)

Aug – Dec 2025

GPA: 3.72 / 4.00 · Dean's Honor Roll · Courses: Machine Learning, Big Data Analytics, IT Project Management

SKILLS

Game Development

- Unity Engine (VR, XR Interaction Toolkit)
- C# scripting — NPC AI, player movement, game logic
- VR mechanics: snap turn, teleport, grabbable objects
- NPC animation, spawn system, XR Device Simulator
- Blender (3D asset modeling)

Programming & Systems

- C#, Python, Java, PHP, SQL
- IoT: ESP32, MQTT, Arduino IDE, sensors
- Hardware-software communication (serial/MQTT)
- Web development (HTML, CSS, JS, PHP, Bootstrap)
- Machine Learning (Python, Apache Spark, Scikit-learn)
- Version Control (Git, GitHub, Unity Version Control)

PROJECTS

MedScan VR — Hospital Triage Simulation Game

Jan – Apr 2026

President University · Course Project · Virtual Reality & IoT

Unity 2022 · C# · XR Interaction Toolkit · ESP32 · MQTT · Arduino IDE · Blender

- Engineered the complete Unity VR environment including player movement (snap turn, teleport), first-person VR interaction, and 3D hospital scene layout from scratch.
- Built a dynamic NPC spawn system with varied patient conditions, NPC animations, and an AI routing mechanism that directs patients to Lobby or Emergency Room based on triage outcome.
- Developed grabbable in-game medical tools (Stethoscope, X-Ray scanner, Thermometer) using XR Interaction Toolkit, each triggering corresponding patient data reads.
- Integrated IoT hardware layer via MQTT: proximity-based patient detection (ultrasonic sensor) triggers OLED display to show patient name, age, temperature, and heart rate in real time; red/green LEDs and buzzer respond to triage classification from Unity.
- All four functional test scenarios passed: stable patient routing, critical patient routing, NPC doctor response, and real-time OLED data display.

2026 – Present

MBG Driver — Low-Poly Arcade Game (In Progress)

Personal Project

Unity · C# · Low-Poly Art Style

- Designing and building a low-poly arcade game where the player drives a government MBG (Makan Bergizi Gratis) van delivering school meals; late deliveries trigger in-game student poisoning events and satirical news broadcasts, creating a consequence-driven gameplay loop.
- Implementing vehicle controller, delivery timer system, and a dynamic consequence system with narrative feedback to create an engaging, humour-driven gameplay loop.
- Documented the development process as a public TikTok devlog series (@iizaiah_); within days of launch, a single video reached 305.6K views, with the series accumulating 436K+ total views and 5,295 followers — demonstrating the ability to communicate technical game development work to a broad audience.

Jun – Jul 2025

Smart-Triage — Maternal Patient Triage System

President University · Collaboration with Faculty of Medicine (FK Jababeka)

React · Vite · FastAPI · Supabase · Python · Vercel · Railway

- Built the full-stack web application as the sole developer: React/Vite frontend deployed on Vercel, FastAPI backend on Railway, and Supabase as the production database.
- Implemented the MEOWS (Modified Early Obstetric Warning Score) algorithm to automate patient risk classification, reducing manual triage workload for healthcare workers in maternity units.
- Deployed to production and implemented across multiple healthcare facilities affiliated with FK Jababeka, in collaboration with President University's Faculty of Medicine. GitHub: github.com/mhmdzahids/Smart-Triage-Project

Jan – Apr 2025

School Management System & Web Development

SMP Plus Rayhan, Cikarang

PHP · HTML · CSS · JavaScript

- Developed a full school management system as a part-time web developer, handling admin, student, and teacher data workflows.
- Delivered basic computer science lessons to students alongside active development responsibilities.

EXPERIENCE

Computer Teacher & Web Developer

SMP Plus Rayhan · Part-time

- Built and maintained a custom school management system used by admin and teaching staff.
- Taught foundational computer skills to junior high students, adapting technical content for a non-technical audience.

Jan – Apr 2025

Web Developer— BenerinAja.my.id

Laptop Maintenance Service · benerinaja.my.id

- Built and launched a small laptop maintenance service (fan cleaning, repasta, OS reinstall) with an online booking platform as part of a university entrepreneurship course.
- Handled web presence, customer coordination, and service delivery as part of a 4-person team.

Feb – May 2025

AWARDS & RECOGNITION

Dean's Honor Roll — INTI International University, Malaysia

2025

Student Mobility Program Certificate — INTI International University, Malaysia

2025

CCNA: Introduction to Networks — Cisco Networking Academy

2025
